Project Experience

Financial Performance & Sales Analytics Dashboard

- Imported and transformed raw sales data using Power Query, ensuring accuracy and consistency across multiple data sources.
- Designed a relational data model and built DAX measures for Total Revenue, Profit Margin, and Year-over-Year Growth, giving stakeholders a single source of truth for performance tracking.
- Built interactive dashboards with slicers and drill-through reports, cutting the time to answer ad-hoc business questions from hours to minutes.
- Analyzed regional and product performance data, surfacing underperforming regions and product lines to guide budget reallocation decisions.
- Delivered executive-ready reports that translated raw sales figures into clear, actionable recommendations for leadership.

Automated ETL Pipeline for Business Reporting

- Built Python scripts to extract, clean, and validate CSV data, eliminating manual data errors.
- Loaded transformed data into SQL, enabling faster and more reliable querying.
- Automated data preparation, reducing reporting turnaround from days to minutes.
- Connected Power BI to SQL for real-time dashboards, replacing static reports.
- Documented workflow and maintained version control in Git for team handoff.

IoT Equipment Performance & Predictive Maintenance Dashboard

- Cleaned and processed high-volume IoT sensor data using Python and Pandas.
- Structured datasets in SQL for efficient querying and analysis.
- Built Power BI dashboards to monitor temperature, vibration, voltage, and equipment status.
- Engineered anomaly-alert KPIs, enabling proactive maintenance scheduling.
- Presented insights via interactive reports, supporting faster operational decisions.
